

## **Epidermolysis Bullosa?**

Have you or your child been diagnosed with  
Epidermolysis Bullosa by a doctor?

The Clinical Research Group at University of Miami is actively recruiting participants ages 12 years and older for a research study looking at the safety and tolerability of an experimental new drug on patients with any form of Epidermolysis Bullosa.

This study involves:

- Topical medical applied as instructed from every other day to twice per week to wounded skin (index wound and other selected wounds) and every day to a section of intact skin.
- Participation in the study for a maximum of 18 weeks: up to 2 weeks screening, 12 weeks treatment and 4 weeks follow up.
- Patients seen on site during Weeks 1, 2, 5, and 12.
- Travel stipend provided for site visits.

Call the study recruiters - Alette Espinosa or Ingrid Herskovitz to find out more information or to see if you may qualify.
